## WIRELESS DISTANCE

---

This wireless Door Chime has an unobstructed operating distance of 200 meters, but local conditions and the number of walls, doors and material affect this. Metal door frames and other factors may interfere with the signal and reduce the operating distance

### RANGE DECREASES WHEN OBSTRUCTED

If your receivers are battery operated, then try new alkaline batteries in the receiver. As the battery depletes, the range of the receiver is reduced.

Older generations of MIP System Wireless Door Chimes have shorter unobstructed operating distances of 100 - 150 meters.

If you require a greater range than what you are able to obtain, then we suggest using the Signal Booster accessory to extend the range. Current model number B7890WH and available from all good stockists.
